

Offer to Renewal SA for Acceptance of Waste Fill

Checklist

Note: This offer is only applicable for soils that meet the EPA 'Waste Fill' criteria as defined in the EPA Waste Derived Fill guidelines. Refer SA EPA "Standard for the production and use of waste derived fill" published 12 January 2010.

Information Required:

1. Volume/weight of soil.
2. Approximate date soil will be available.
3. Proposed delivery process.
4. Description of soil (including colour, soil type, consistency).
5. Site plan identifying source of material.
6. Plan identifying stockpile sampling locations and/or in-situ sampling locations.
7. Environmental laboratory certificates.
8. Geotechnical certificates.
9. Tabulated laboratory results compared to EPA Waste Derived Fill criteria.
10. Statement from an environmental consultant or Site Contamination Auditor confirming soil meets 'Waste Fill' criteria.
11. Any limitations on the use of the soil.

The majority of this information would generally be provided in an Environmental Consultants report commissioned by the source site for this purpose. If a report covers an area in which only a portion will be disposed as fill, then the section of the report pertaining to the fill material should be highlighted. If available information differs to that listed above, please outline available information and Renewal SA will discuss any further requirements.
